

FEATURES:

- 5-1/4" long wood handle
- 5/8" long 3/16" dia. aluminum pins
- helps reduce physical fatigue to fingers and hands
- can be used to move individual or multiple canes during any stage of the caning process
- handle of tool provides mechanical advantage so that very little force is needed to move cane

APPLICATION:

This tool is used in the hand weaving of cane to straighten and align the cane where it intersects.

SPECIFICATIONS:

INSTRUCTIONS:

The pins of tool are inserted into the weave. Then the handle of the tool are turned clockwise or counterclockwise as needed to properly position cane. This is repeated at all four sides of each intersection.

Tool can also be used during any step of weaving to move single or multiple strands of cane by hooking one or both pins behind cane and pulling it into position.
