SUPPLEMENTAL INFORMATION:

**MATERIAL SAFETY DATA SHEET
STICK FAST™ CYANOACRYLATE ADHESIVES****EMERGENCY PHONE: 1-800-255-3924****SKIN ADHESION:**

First immerse the bonded surface in warm soapy water. Peel or roll the surface apart with the aid of a blunt edge such as a pencil, spoon, handle, etc. Do this gradually in a gentle fashion, with care not to be too forceful. Then remove the adhesive from the skin with soap and water. **DO NOT** try to pull surface apart with a direct opposing action.

EYELID TO EYELID OR EYEBALL ADHESION:

In the event that eyelids are stuck together or bonded to the eyeball, wash thoroughly with warm water and apply a gauze patch. The eye will open without further action, typically in one to four days. There will be no residual damage. **DO NOT** try to open eyes by manipulation. Let the natural cleansing action of the eye take place.

ADHESIVE ON THE EYEBALL:

Cyanoacrylate introduction into the eyes will attach itself to the eye protein and will disassociate from it over intermittent periods, generally covering several hours. This will cause periods of tearing until clearance is achieved. The adhesive residue will flush out of the eye normally in a matter of hours.

MOUTH:

If lips are accidentally stuck together, apply lots of warm water to the lips and encourage maximum wetting and pressure from saliva inside the mouth. Peel or roll the lips apart. **DO NOT** try to pull the lips apart with a direct opposing action. It is almost impossible to swallow cyanoacrylate. The adhesive solidifies and adheres in the mouth saliva will lift the adhesive in 12 to 48 hours.

BURNS:

Cyanoacrylates give off heat on solidification in rare cases a large amount will increase in temperature enough to cause a burn. Should this occur treat using normal medical burn procedures.
